SUMMARY

Aspiring AI Engineer and third-year B.Tech student in Artificial Intelligence and Data Science with hands-on experience building and shipping end-to-end AI systems — agentic architectures, multimodal assistants, real-time voice platforms, and generative models (GANs, Diffusion). Reduced voice-AI latency by 55% (2s to 0.9s) in a WebRTC interview platform and built a memory-persistent AI mentor piloted with students. Strong foundation in Deep Learning, Computer Vision, NLP, and LLM-based systems with LangChain, LangGraph, TensorFlow, and PyTorch. National-level hackathon finalist seeking an AI Engineer role to build production-grade intelligent systems.

PROFESSIONAL EXPERIENCE

AI Engineer (Project) — Rviewer AI

March 2026

Resume-Based AI Interview Platform • Voice-to-Voice WebRTC & Model Layer Developer

- Developed a resume-driven, high-level AI interview platform enabling real-time voice-to-voice conversation over peer-to-peer WebRTC connections.
- Engineered the voice pipeline and model layer, **cutting end-to-end response latency from 2s to 0.9s — a 55% improvement** — for natural, real-time interview flow.
- Designed a layered, phase-based NLP evaluation system that questions, evaluates, and analyzes candidates across communication, leadership, and critical thinking.
- Represented the college at INTEC 2026 (CODISSIA, Coimbatore), demonstrating the platform live to industry professionals and building connections with interested visitors.

AI Engineer (Project) — Scholar AI

February 2026

Memory-Persistent Personal AI Mentor • Model & Agentic System Developer

- Created a memory-persistent personal AI mentor that retains each student's academic details and college knowledge, delivering tailored, context-aware guidance for upskilling.
- Engineered multimodal capabilities — Computer Vision, NLP, and voice — on top of LLMs with retrieval-augmented (RAG-style) memory for grounded, personalized responses.
- Piloted with 5 students**, validating memory persistence and mentor-style guidance across real academic queries.
- Showcased on behalf of the college at INTEC 2026, CODISSIA, Coimbatore.

AI Engineer (Project) — Agentic Trip Planner

October 2025

Dynamic Itinerary Agent • Stateful AI with Tools & Sub-agents

- Built a stateful trip-planning agent powered by LLMs, a knowledge graph, and a map-integrated chat system that **generates dynamic itineraries for any destination**.
- Implemented live search and web-scraping tools with sub-agents to surface real-time destination data, schedule visits with timing, and assist the traveler throughout the trip.

PROJECTS

- Butterfly Image Classifier** — Deep Learning CNN achieving **93% classification accuracy** (TensorFlow, PyTorch, Gradio).
- Hand Sign Predictor** — real-time Computer Vision detection with YOLOv8 and OpenCV (Gradio, SQLite).
- Real-Time Resume Analyser** — instant resume scoring web app (Python, Streamlit, SQLite).
- Transformer-Based Text Generator** — NLP text generation with a transformer model (TensorFlow, PyTorch).
- Generative Models** — trained GAN and Diffusion models for image generation as applied deep-learning practice.

SKILLS

Programming Languages: Python, C++, Java, C, JavaScript, TypeScript, HTML, CSS

AI / ML: Deep Learning, Machine Learning, Computer Vision, NLP, LLMs, Generative AI (Transformers, GANs, Diffusion Models), RAG, MLOps (basics)

Frameworks & Libraries: TensorFlow, PyTorch, OpenCV, NumPy, Pandas, CUDA, YOLOv8, Hugging Face

Agentic AI: LangChain, LangGraph, CrewAI, AutoGen, Knowledge Graphs, Tool-Using & Multi-Agent Systems

Web & Tools: React, WebRTC, Git, GitHub, Gradio, Streamlit, Kaggle, SQLite, Data Structures & Algorithms

Languages: English, Tamil

RESEARCH & EXPLORATION

- Actively read and study foundational AI research papers to inform system design.
- **Attention Is All You Need** (Vaswani et al., 2017) – transformer architecture and self-attention; foundation for the transformer-based text generator project.
- **Retrieval-Augmented Generation for Knowledge-Intensive NLP Tasks** (Lewis et al., 2020) – RAG concepts applied in Scholar AI's memory-persistent, knowledge-grounded responses.

AREAS OF INTEREST

Exploring and building end-to-end AI systems – agentic AI architectures, multimodal models, real-time voice AI, generative models (GANs, Diffusion), and retrieval-augmented LLM applications.

ACHIEVEMENTS

- **Finalist, Cicada 2025** – national-level hackathon at KPR Institute of Engineering and Technology; selected to the final round.
- **24-Hour National AI Hackathon** – St. Joseph's College, Chennai.
- **Model Development Hackathon** – Sona College of Technology, Salem.
- **College Representative, INTEC 2026** (CODISSIA, Coimbatore) – showcased Scholar AI and Rviewer AI; connected with industry professionals who expressed interest in the products.

CERTIFICATIONS

- Avinash Academy – C, C++, and Python Fundamentals
- NPTEL – Business Fundamentals for Entrepreneurs

EDUCATION

Bannari Amman Institute of Technology	2024 – 2028 (Expected)
• B.Tech – Artificial Intelligence and Data Science CGPA: 8.28 (Third Year) • Relevant Coursework: Data Structures & Algorithms, Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, Linear Algebra, Probability & Statistics, Database Management Systems	
M.S. Vidyalyaya Matriculation School	2011 – 2024
• Class XII: 90% Class X: 93%
